She opened the first birth control clinic in the United States, founded Planned Parenthood, and was
instrumental in the development of the first birth control pill. She was an important first-wave feminist and believed that women should be able to decide if and when to have children. Sanger campaigned for the legalization of contraceptives by giving speeches, writing books, and breaking laws - leading to eight arrests. She endorsed both the
Malthusianism and eugenics movements, believing that they would generate support for birth control. She established a network of dozens of birth control clinics, which provided services to hundreds of thousands of patients. She discouraged abortion, and her clinics never offered abortion services during her lifetime. Her activism led to the Griswold v.
Connecticut decision, which legalized contraception. (Full articles About Vincent de Groof's flying machine ... that Vincent de Groof's flying machine (pictured) in 1874, only to die after crashing it 10 days later? ...

(14,170 ft) above mean sea level. It is the third-largest geyser field in the world and the largest in the Southern Hemisphere. The geothermal field has many geysers, hot springs, and associated sinter deposits. These hot springs eventually form the Rio Salado, a major tributary of the Rio Loa, and are a major source of arsenic pollution in the river. The
vents are sites of populations of extremophile microorganisms such as hyperthermophiles, and El Tatio has been studied as an analogue for the early Earth and possible past life on Mars. was an important element in the Industrial Revolution in Europe. The American Revolutionary War took place in the late 18th century, elements of Enlightenment thinking culminated in the Atlantic
Revolutions. Revolutions began to challenge the legitimacy of monarchical and aristocratic power structures. The European colonization of the Americas and other parts of the world intensified and associated mass migrations of people grew
in size as part of the Age of Sail. During the century, slave trading expanded across the shores of their work. For example, the "short" 18th century may be defined as 1715-1789, denoting the period
of time between the death of Louis XIV of France and the start of the French Revolution, with an emphasis on directly interconnected events. [3][4] To historians who expand the century to include larger historical movements, the "long" 18th century[5] may run from the Glorious Revolution of 1688 to the Battle of Waterloo in 1815[6] or even later. [7]
France was the sole world superpower from 1659, after it defeated Spain, until 1815, when it was defeated by Britain and its coalitions following the French Revolution of 1789, and was later compromised by the excesses of the Reign of
Terror. At first, many monarchies of Europe embraced Enlightenment ideals, but in the French Revolution to oppose the French Revolutionary Wars. Various conflicts throughout the century, including the War of the Spanish Succession and the Seven Years' War,
saw Great Britain triumph over its rivals to become the preeminent power in Europe. However, Britain's attempts to exert its authority over the Polish-Lithuanian Commonwealth as an independent state. Its semi-democratic government
system was not robust enough to prevent partition by the neighboring states of Austria, Prussia, and Russia. In West Asia, Nader Shah led Persia in successful military campaigns. The Ottoman Empire experienced a period of peace, taking no part in European wars from 1740 to 1768. As a result, the empire was not exposed to Europe's military
improvements during the Seven Years' War. The Ottoman military consequently lagged behind and suffered several defeats against Russia in the second half of the expansion of the Maratha Confederacy and an increasing level of European influence and control in the
region. In 1739, Persian emperor Nader Shah invaded and plundered Delhi, the capital of the Mughal Empire. Later, his general Ahmad Shah Durrani scored another victory against the Marathas, the then dominant power in India, in the Third Battle of Panipat in 1761.[8] By the middle of the century, the British East India Company began to conquer
eastern India,[9][8] and by the end of the century, the Anglo-Mysore Wars against Tipu Sultan and his father Hyder Ali, led to Company rule over the south.[10][11] In East Asia, the century was marked by the High Qing era, a period characterized by significant cultural and territorial expansion. This period also experienced relative peace and
prosperity, allowing for societal growth, increasing literacy rates, flourishing trade, and consolidating imperial power across the vast Qing dynasty's territories. Conversely, the continual seclusion policy of the Tokugawa shogunate also brought a peaceful era called Pax Tokugawa and experienced a flourishment of the arts as well as scientific
 knowledge and advancements, which were introduced to Japan through the Dutch port of Nagasaki. In Southeast Asia, the Konbaung-Ayutthaya Wars and the Tây Son Wars broke out while the Dutch East India Company established increasing levels of control over the Mataram Sultanate. In Africa, the Ethiopian Empire underwent the Zemene
Mesafint, a period when the country was ruled by a class of regional noblemen and the emperor was merely a figurehead. The Atlantic slave trade also saw the continued involvement of states such as the Oyo Empire. In Oceania, the European colonization of Australia and New Zealand began during the late half of the century. In the Americas, the
United States declared its independence from Great Britain. In 1776, Thomas Jefferson wrote the Declaration of Independence. In 1789, George Washington was inaugurated as the first president. Benjamin Franklin traveled to Europe where he was hailed as an inventor. Examples of his inventions include the lightning rod and bifocal glasses. Túpac
