Version 4.2.1 will be available on 2nd August 2016, bringing a new way of easily recording analogue sound sources so you can effortlessly manage digital and analogue music in one library. Using its audio analysis technology, rekordbox detects the silence between tracks and creates a separate file in your library for each one, so you can just press play and record a whole album from an analogue source to individual tracks without resetting the recording in between songs. And thanks to the new normalise function, when you DJ using recorded tracks their volume will be automatically standardised so theres no need for you to edit them in advance. Were also making it easier to find the perfect track to play next in your set with the new Matching feature. You can audition tracks in rekordbox and mark the ones that mix well together, then when youre DJing on certain multiplayers (CDJ-TOUR1, CDJ-2000NXS2), you can choose to display the tracks that youve matched with the track thats currently playing (firmware update required). Were also releasing the new RMX EFFECTS Plus Pack for rekordbox dj. Taking the Scene FX from our RMX hardware effects units used by DJs and producers for live performances and track-making the Plus Pack brings exciting new ways for you to unleash your creativity and make your sets unique. And to further improve the accessibility of rekordbox, the application now supports all languages supported by Mac OS and Windows, including Hebrew and Arabic. Download rekordbox 4.2.1 To use the RMX EFFECTS Plus Pack Download the latest version of rekordbox for free. Buy rekordbox dj and RMX EFFECTS Plus Pack licence keys. Alternatively, you can subscribe to rekordbox dj and get the RMX EFFECTS Plus Pack as part of your subscription plan. Find out more about the rekordbox family. Plus Packs add performance features to our free rekordbox music management application: KEY FEATURES OF RECORDING IN rekordbox Easy track management Start recording with ease thanks to the simple GUI thats free of complex settings. Recorded tracks are automatically added to your library so you can find them easily and add them to playlists. Automatic recording Play your analogue sound source and rekordbox starts recording, then it stops when it detects silence between tracks or when you pause playback. Theres no need for you to edit out silence. Automatic track creation Each time rekordbox detects silence and pauses recording, a new file is automatically added to your library. Theres no need to manually divide recorded audio into tracks. Normalise function The volume of recorded files is automatically adjusted to a standard level and saved so you dont need to edit their volume manually. KEY FEATURES OF THE RMX EFFECTS rekordbox dj PLUS PACK Scene FX taken from the Remix Station effects units can be used to highlight exciting sections of tracks or insert breaks to create live remixes. Effects to highlighting exciting sections in tracks BPF Echo - Adds the sound that has passed through the band pass filter to the original sound and adds echo. Noise - Adds white noise generated internally to the sound. Spiral Up - Raises pitch of the sound while changing echo reverburation time. Reverb Up - Adds a reverburation effect to the sound and raises the pitch of the echo as time passes. Effects for inserting breaks into tracks HPF Echo - Passes the sound through the high pass filter and adds echo. LPF Echo - Passes the sound through the low pass filter and adds echo. Crush Echo - Creates a sound as if the sound were crushed and adds echo. Spiral Down - Lowers the pitch of the sound while changing echo reverburation time. Reverb Down - Adds a reverburation effect to the sound and lowers the pitch of the echo as time passes. Additional features of rekordbox Version 4.2.1 when using CDJ-TOUR1 or CDJ-2000NXS2 multiplayers (firmware update required) Audition tracks in rekordbox before your performance and mark the ones that mix well together using the new Matching feature. When playing one of those tracks in your set, the multiplayer suggests matched tracks to play next. Enlarged waveforms of tracks playing in rekordbox dj are shown on the multiplayers screen when a PC/Mac is directly connected to the CDJs using only USB cables (USB-HID control). KUVU is available even when connected using only USB cables (USB-HID control). Windows 64-bit application available soon As well as the existing 32-bit application, a 64-bit version of rekordbox 4.2.1 will be available for Windows, so you can choose the one that best suits your operating system and gives the optimum performance. Expanded language support in rekordbox Version 4.2.1 Displaying and browsing using right-to-left languages is now available, including Hebrew and Arabic. rekordbox now supports all languages supported by Mac OS and Windows. rekordbox MINIMUM SYSTEM REQUIREMENTS OS (Windows) Windows 10, 8.1, 7 (The latest service pack) OS (Mac) Mac OS X 10.11, 10.10, 10.9 (Updated to the latest version) CPU Intel processor Core i7, i5, i3, Intel processor Core 2 Duo 2.0GHz or higher Memory 4GB or more of RAM Hard Drive 250MB or more of free space (not including space for storing music files, etc.) Display resolution 1280 x 768 or greater Experience the road like never before Explore Pioneer Corporation today announced that it will begin manufacturing in-car products in India in 2026. Following the establishment of an R&D center in the country in 2023, this strategic initiative will further enhance the Pioneer Groups presence and position in India, where the automotive industry has been enjoying outstanding growth annually. Under the corporate vision of Creating the Future of Mobility Experiences, Pioneer has been stepping up its efforts to transform itself into a solutions company. Furthermore, the company has been taking steps toward becoming a major player in the global arena, including bringing in executives and industry veterans from outside and establishing R&D facilities in India and Germany. Pioneer considers India as one of its high-priority markets outside Japan. The start of local production of in-car products, in collaboration with local contractors, will enable us to establish an end-to-end value chain in the country, ranging from B2B sales and R&D to manufacturing and post-delivery support. This will give us an excellent opportunity to bolster our business with Indian automakers. In particular, we will be able to serve them better by becoming more flexible in accommodating local needs into product design and manufacturing, substantially reducing delivery lead time, and providing after-sale service support promptly when needed. Local production is scheduled to start with Display Audio products for automakers, and we will consider expanding the scope of production to include a broader range of in-car products, both for factory installation and for retail channels. Commenting on the strategic decision, Shiro Yahara, President and CEO of Pioneer Corporation, said, We are excited to start the manufacture of in-car products in India. The shift to local production will enable us to better serve local automakers close to their home turf. It is a huge step forward for Pioneer to become one of the key players in the fast-growing Indian auto industry and to drive the growth of our global business in the long term. With the start of local production, we are confident that our commitment to India will become stronger than ever. By establishing closer partnerships with local automotive manufacturers, we will provide a wider range of products and services to meet the needs of evolving Indian automotive customers, said Aniket Kulkarni, Managing Director of Pioneer India Electronics Private Ltd. Starting local production in India is perfectly in line with the Make in India initiative launched and promoted by the Indian government to drive domestic manufacturing, and is also part of Pioneers strategy to deliver enhanced mobility experiences to drivers and passengers around the world. Media contacts Pioneer Corporation About Pioneer Corporation Pioneer is a leading global manufacturer that has been developing an array of world-first products and services since its inception in 1938 based on its corporate philosophy of Move the Heart and Touch the Soul. Pioneer India is the Indian Subsidiary of Pioneer Corporation, Japan. Incorporated in 2008, Pioneer Indias core business covers the car audio and video segments with a diversified range of products focusing on Speakers, Amplifiers and car audio-visual solutions. Pioneer India, work in line with the corporate vision, to become a company that works together in pursuing innovations one after another. Pioneer India aims to continuously introduce innovative products that will raise entertainment to the level of pure emotion. Click here to download Corporate Social Responsibility (CSR) Policy of Pioneer India Pioneer was founded in 1938 in Tokyo, Japan by Nozomu Matsumoto a man with a passion for music that he hoped to share with the world through high quality audio speakers. That passion began with a small operation to repair and manufacture speakers in Matsumotos garage. It has since grown to international stature as a manufacturer of audio and video products for use at home, in the car and in business environments. The element that has not changed in nearly 70 years is the passion for audio and video products that we hope to share with the world. From the employees at our research labs looking for the next big thing to the engineers at our factories focused on quality assurance to our product trainers explaining the new technology to our customers we remain passionate about creating an unbeatable entertainment experience. We invite you to spend some time surfing our Web site. Check out the newest product line, learn more about the technology and how it can impact your life. We think that well capture your passion for entertainment. And that youll want to see and hear more.
