Take note of the displayed code, as this is the current access code programmed into your Kwikset smart lock. 1 Open and unlock your door. At the core of Kwikset smart locks lies their ability to provide homeowners with remote access control. Following the lock's indication, proceed to press the "Lock" button on the control panel. With the existing code in hand, you are now prepared to embark on the next phase: changing the smart lock code to align with your evolving security needs. After pressing the program button, the lock's status light should illuminate, indicating that it is ready to receive the new access code. You will hear one short beep, and the keypad will flash green.Press the "3" button. After pressing the program button, the lock's status light should illuminate, indicating that the lock is ready to retrieve the existing access code.
