Entertainment in the 16th century ^ a b Modern reference works on the period tend to follow the introduction of the Gregorian calendar for the sake of clarity; thus NASA's lunar eclipse catalogue states "The Gregorian calendar is used for all dates from 1582 Oct 15 onwards. Before that date, the Julian calendar is used." For dates after 15 October 1582, care must be taken to avoid confusion of the two styles. ^ de Vries, Jan (14 September 2009). Plastic Shrinkage Calculator Plastic Footprint Calculator The following formula is used to calculate the plastic modulus of a cross-section. Z = frac{2BfTf(D - Tf) + Tw(D - 2Tf)^2}{4} Variables: Z is the plastic modulus (mm³) Bf is the flange width (mm) Tf is the flange thickness (mm) D is the overall depth of the section (mm) Tw is the web thickness (mm) To calculate the plastic modulus, use the formula above where the section depth (D), flange width (Bf), flange thickness (Tf), and web thickness (Tw) are known. The plastic modulus is a measure of the cross-section's ability to undergo plastic deformation under bending. The plastic modulus is a geometric property of a cross-section that is used in structural engineering to determine the moment capacity of a beam in the plastic range of deformation. It is a measure of the distribution of material away from the neutral axis of the section and is used in the design of steel structures, where plastic behavior is considered. The following steps outline how to calculate the Plastic Modulus. First, determine the overall depth of the section (D) in millimeters. Next, determine the flange width (Bf) in millimeters. Next, determine the flange thickness (Tf) in millimeters. Next, determine the web thickness (Tw) in millimeters. Next, gather the formula from above = Z = (2BfTf(D - Tf) + Tw(D - 2Tf)^2) / 4. Finally, calculate the Plastic Modulus (Z) in cubic millimeters. After inserting the variables and calculating the result, check your answer with the calculator above. Example Problem : Use the following variables as an example problem to test your knowledge. overall depth of the section (D) = 300 mm flange width (Bf) = 150 mm flange thickness (Tf) = 20 mm web thickness (Tw) = 10 mm
